

Respectfully, I urge you to reject NAB petition 04-160.  
Retired and travelling a lot via automobile (just completed a 6 week coast-to-coast adventure in our Subaru Outback, license plate 2ADVTR), the availability of satellite radio and its many features has become very important to us. Local radio, with its reception problems and endless searches for a strong signal with appropriate programming, simply doesn't meet our needs.

The Entrenched will always resist change. Yet change, especially technological change, is inevitable and stimulating.

Please don't let those who would inhibit progress stand in our way!
